**Subject:** Dewey Burdock - Site Assessment

Below is the statement from the Dewey Burdock UIC Draft Permit Communication strategy that discuss the Site Assessment program activities. This provides an overview of the Site Assessment program activities. Let me know if you need additional information regarding this PA and SI.

Victor

Victor Ketellapper, PE  
Team Leader, Site Assessment Program  
USEPA Region 8

In 2013, the non-profit Institute of Range and American Mustang (IRAM), owner of the Black Hills Wild Horse Sanctuary, requested an assessment of the abandoned open pit uranium mines, named Darrow/Freezeout/Triangle (DFT) Uranium Mine Site which is separate from, but in the vicinity of, the proposed Dewey-Burdock ISR Project. In response to the citizen's petition, EPA's Superfund program completed a preliminary assessment and concluded that further assessment was necessary. EPA then conducted a site inspection (SI) in September 2015 to evaluate potential impacts to sensitive environments and fisheries. The SI report was completed in March 2016. The EPA Site Assessment Program made a decision of no further remedial action planned (NFRAP) based on this report.
